

Formwork PP

Pedestrian area, bicycle paths: to use as an alternative cover for catch basin when the surface appearance has to be kept unaltered.

Material: Polypropylene.

The cover's cavity has to be filled with the proper material (as shown in the pictures).

Installation: the recessed cover perfectly fits the REDI catch basin.

Always use a frame when closing concrete catch basins or in case of special applications.

Once installed, it can be easily lifted off by the central pin.

Durability: as Polypropylene is a plastic corrosion proof material, the REDI recessed cover is the best alternative to metal products subject to deformation due to atmospheric agents and ageing.
