ProtectaFlex Detect

Flexible double
containment
solution for safe and
reliable chemicals
transportation and
dosing with leak
detection system.

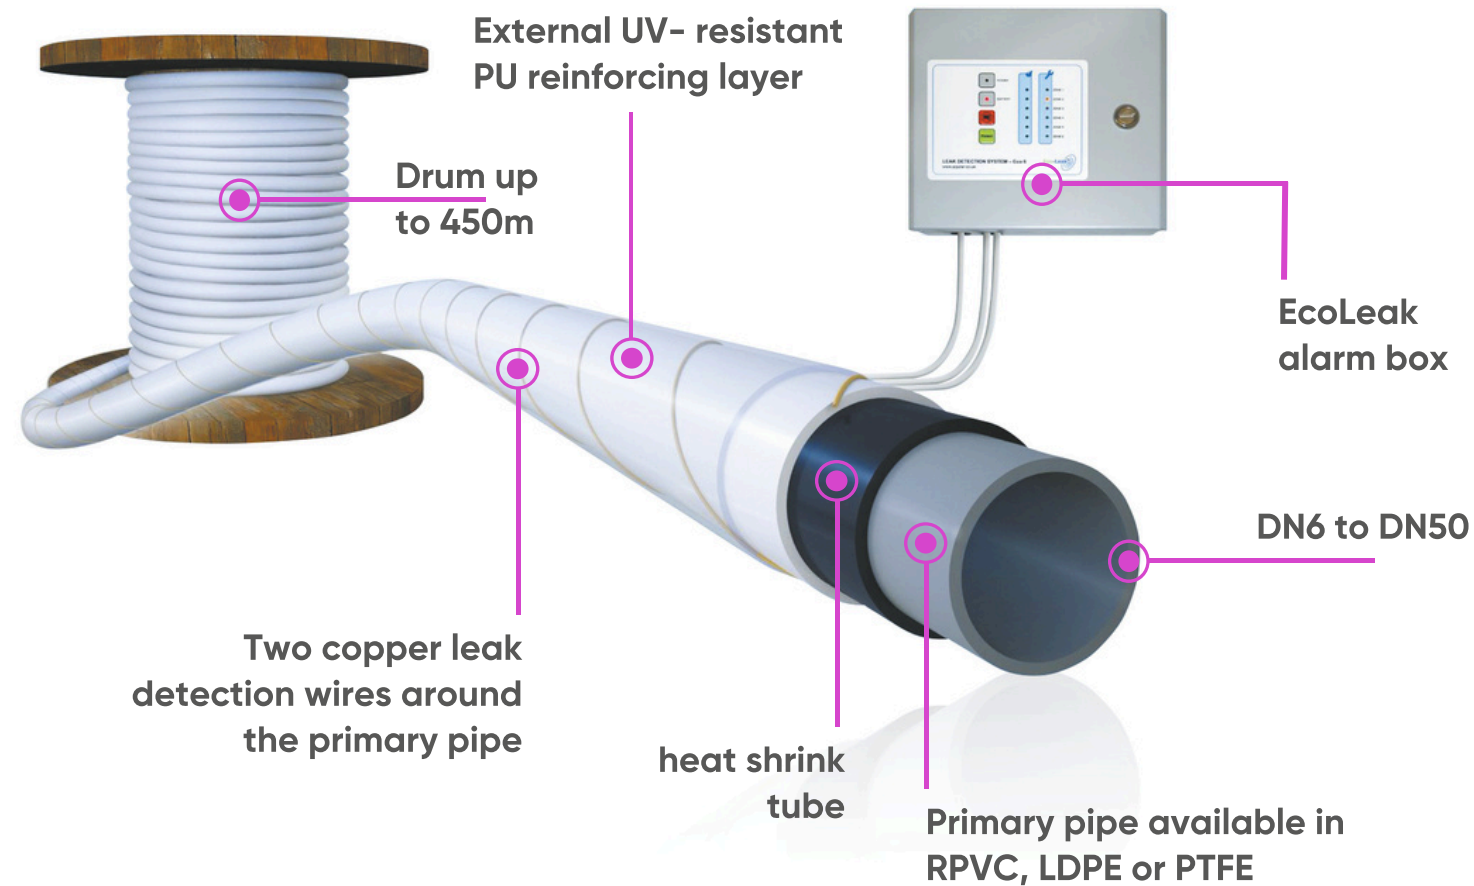

ProtectaFlex Detect

Offers heightened protection against risks to both people and the environment by preventing unnoticed escape of hazardous liquids from pipe systems. The detection system, in the event of a minimal leak or system cable failure, triggers an immediate visual and audible alarm and the shut-off procedure.

Unique flexible Design

ProtectaFlex Detect features a primary pipe made of RPVC, LDPE, or PTFE, surrounded by a reinforced PU layer for pressure resistance, allowing a broad chemical compatibility with different kind of fluids. Two copper wires around the primary pipe enhance its reliability in case of a leak.

Features and Benefits

- **Flexible Pipe:** Reduced bending radius, easier to handle and install.
- **Reliable:** strong resistance to pressure and chemical attack.
- **Safe:** Immediate visual and audible alarm in case of chemical leak or system failure.
- **Cost-efficient Installation:** Supplied with a simple installing kit.
- **Easy to Maintain:** Quicker and safer cleaning and pipe replacement.
- **Lightweight and Compact:** lighter than traditional systems, reducing transport and packaging costs.
